

Bloodborne Pathogens

Bloodborne Pathogens in the Workplace

MEDIC FIRST AID® Bloodborne Pathogens in the Workplace is designed to provide students with the essential knowledge necessary to help reduce or eliminate the occupational risk of bloodborne pathogens. The training program teaches information that every employee who has occupational exposure needs to know to avoid accidental exposure to potentially infectious materials and to manage an accidental exposure if one occurs.

This stand-alone training program is intended to help meet Occupational Safety and Health Administration (OSHA) training regulations in regard to bloodborne pathogens. It can be combined with any nationally recognized CPR, AED, or first aid course.

The MEDIC FIRST AID Bloodborne Pathogens program offers the same easy-learning, low-stress class environment you expect from all MEDIC FIRST AID training programs. Excellent video presentations are supported by quality printed student materials and an easy-to-use Instructor Guide.

Topics covered in the program:

- What are Bloodborne Pathogens
- Specific Bloodborne Pathogens:
 - Hepatitis B Virus
 - Hepatitis C Virus
 - Human Immunodeficiency Virus (HIV)
- Transmitting Bloodborne Pathogens
- Your Employer's Exposure Control Plan
- Recognizing the Potential for Exposure
- Methods to Control the Risk of Exposure
- Using Personal Protective Equipment (PPE)
- Hepatitis B Immunization
- When an Exposure Occurs
- Housekeeping
- Communicating a Hazard in the Workplace

Class completion time: 1 to 2 hours
